DENVER, Colo. — Campos Energy, a new **energy investment, development, and infrastructure platform** from the Campos Family of Companies, is officially launching to help utilities, developers, municipalities, and owner-operators *finance, develop, and deliver critical energy infrastructure* projects across North America.

As energy demand continues to grow and infrastructure investment accelerates, organizations face increasing pressure to move projects from concept to completion with greater speed and certainty. *Campos Energy was created to bridge the gap between capital and execution, combining strategic investment with more than two decades of engineering, construction, and project delivery expertise.*

Unlike traditional financing providers, Campos Energy leverages the full capabilities of the Campos Family of Companies through the OneCampos platform—an integrated model that brings together investment, engineering, procurement, fabrication, construction, and project delivery under one organization. With deep experience across electrical infrastructure, power generation, substations, natural gas systems, utility modernization, and emerging energy markets, Campos Energy provides clients with a single partner capable of moving projects from concept to completion with greater speed, certainty, and accountability.

“Campos Energy represents the next chapter in the evolution of the Campos Family of Companies,” said Marco Campos, Founder/Executive Chairman and Chief Culture Officer of the Campos Family of Companies. *“For more than two decades, we’ve helped clients design and build critical energy infrastructure across North America. Today, we’re expanding that vision by combining our execution expertise with strategic investment to help develop, finance, and deliver energy infrastructure that creates lasting value. This platform positions us to invest in the future of energy while strengthening our ability to grow the impact of the Campos Foundation and the communities we serve.”*

Campos Energy focuses on high-impact infrastructure opportunities across North America, partnering with utilities, municipalities, independent developers, industrial organizations, and private investors to advance projects that strengthen grid reliability, modernize aging infrastructure, expand energy access, and support long-term economic growth.

By combining flexible capital with the execution capabilities of the Campos Family of Companies, clients gain a single strategic partner capable of supporting projects from early-stage development and financing through engineering, construction, and project delivery.

Whether advancing electrical generation, substations, natural gas infrastructure, utility modernization, renewable integration, or other critical energy investments, Campos Energy is committed to helping clients bring the infrastructure of tomorrow to life. At Campos, we believe **“The Future Runs on What We Build.”**
